

Harmony

Harmony patient entertainment system helps your patients to relax during their scan by watching HD movies, listening to music, or simply viewing a slideshow of photographs.

Harmony is compatible with all 1.5T and 3T scanners. Its high quality audio-visual system is also ideal for fMRI.

- Relaxing patient experience
- Better image quality
- Fewer aborted or repeated sequences
- Improved operational efficiency

New Solutions

→ Harmony entertainment hub

Easy to operate

The Harmony Entertainment Hub is located in the MRI control room. It's operated by simple touch screen controls.

Let your patient choose

Patients can watch HD movies, listen to music, or look at a slideshow of photographs.

Choose from Harmony's built in library, or offer your own content such as internet music and movie streaming; or invite your patients to bring along their own media.

Maintain communication

The Hub's high-resolution display and speakers mirror the images and sound presented to your patient, so you always know exactly what they're experiencing.

You can interrupt the audio stream at any time, and speak to them via the Hub microphone.

→ BOLDscreen displays

Cambridge Research Systems' BOLDscreen range are industry leaders. Built from the ground up for MRI, they offer outstanding image quality and value for money.

"BOLDscreen provides an absolutely fabulous image and our testing shows no artefacts whatsoever."

We offer a range of screen sizes to suit your installation. All BOLDscreens can be sited anywhere in the MRI room, using a VESA mount or trolley. They can be viewed directly, or via freestanding or headcoil mounted mirror, with the image easily flipped or inverted to suit.

→ BOLDfonic audio

BOLDfonic delivers high-fidelity audio, far superior to air-tube solutions, while also attenuating scanner noise. We offer a range of headphone options, and our earbud solution is suitable for even tight fitting headcoils.

"The BOLDfonic system is better to listen to and, due to the reduced noise-level it results in less fatigue"

Trusted Technology

Why choose CRS?

Cambridge Research Systems is an innovative manufacturer, delivering high quality MR Safe technologies to prestigious universities and hospitals worldwide.

Our background in research applications means you can be confident that our tools provide precision and control, while remaining reliable, practical and affordable - the engineering philosophy which we have held since our incorporation in 1989.

fMRI & more

Harmony is ideal for presenting high quality fMRI stimuli.

We also supply integrated eye tracking, a range of response devices, and an atlas optimised visual cortex imaging coil

→ Patient comfort accessories

MediGlasses

MR Safe prescription glasses with interchangeable push-fit lenses allow patients with reduced acuity to see clearly within the scanner room and bore.

NoMoCo pillows

Reduce motion artifacts even further, with NoMoCo pillows. A range of options to provide superb patient comfort, support and sensory feedback, improving their experience and the quality of your scan.
